

EXPERIMENT WITH CLOVES, TIMOTHY, AND OTHERS.—We copy the following from the *Country Gentleman*:—
The Farmers.—We present that the frost on Monday last did considerable injury. Our friend White was not about there at the time, so we can only state what we have been told. The frost was a severe one, extending over some hundreds of apple, peach, pear, and cherry. Most of the germs of the cherries upon the branches given us seem to have been killed. Those of the pears, we think, are not dead, but those of the apples and peaches seem to be unique. We shall be glad to hear from our friends in the country, etc.

(For the *Louisville Journal*.)

PAINT MIXING.
Messrs. Enrons: I am frequently asked for the proportion of white lead, oil, and turpentine to make a good paint for propelling machinery. The following is taken from Hawes' *Practical Guide to Painting and Polishing*.
The turpentine paint requires about one lb. to the square feet for coats.

LEAD COLOR.
White lead in oil, 65
Lampblack, 25
Boiled oil, 25
Spirits turpentine, 3
Water, 9
Paint, 9
Spiced turpentine, 8
Oil, 4
Turpentine, 4

One pint water requires about one lb. to the square feet for coats.

STONE COLOR (GRAY).

White lead in oil, 78
Spirits turpentine, 3
Water, 9
Paint, 9
Lampblack, 25
Turpentine, 4

One pint water requires about one lb. to the square feet for coats.

CHEESE COLOR.

White lead in oil, 66.6
Lampblack, 25
Japan, 1.3
Oil, 24
Turpentine, 2.5

One pint water requires about one lb. to the square feet for coats.

BLACK COLOR.

White lead in oil, 75
Boiled linseed oil, 1
Japan, 1
Turpentine, 1

One pint water requires about one lb. to the square feet for coats.

The Japan and turpentine are added last.

The above, with some other forms, are the mixtures I suppose as used in the U. S. Navy, in which they are used.

Bolted oil is here prescribed pretty freely—for

so much as we are accustomed to see it in civil life.

The paint required for propelling machinery is almost exclusively; and as we should do here, for the sake of economy, in the use of paint, we may make it objectionable.

The reason of this is that paint mixed with oil is not durable, and again, the oiling of the oil is not exactly pleasant work. Hence, bolted oil is more easily prepared.

The majority of the emigrants are females. None of the men have more than one wife, and many of them are quite good specimens.

They are generally very intelligent looking.

It is a wise thing for our Government to take some steps in anticipation of what may come.

THESE facts are all that I am able to give you.

Mr. Stuck took great interest in the progress of the expedition, and was most anxious to afford them every assistance.

He examined the provisions of the law, and

arrived at the conclusion that they could not do so, it was decided that they should not go for a time.

Mr. Stuck, in his report, said:

"I am sorry to say that the Indians are

now in full force, and are to be expected."

Mr. Stuck, in his report, said:

"I am sorry to say that the Indians are

now in full force, and are to be expected."
